Re: Manager's Report

Public Safety Committee – The Public Safety Committee met on Monday, July 8 at 8:00 a.m. to discuss the possible purchase of a replacement fire truck. The new unit would be equipped with compressed air foam (CAFS), which requires much less water for the truck to carry, and is overall more efficient. The new unit, if approved, will be paid for by the Rural Fire District, but would become an asset of the City of Cameron. The Committee's recommendation is to seek bids through advertisement, and make a temporary loan from the Electric Department. The funds would be transferred back over a period of approximately five years.

Dangerous Structures – Clyde has provided a list of structures and their status in this week's packets.

Construction and Operational Projects –

- The Public Works Department has combined two projects, where dirt needs to be moved from a drainage area on Grand Ave. This material will provide a base for the trail at #2 Reservoir, and it has been hauled to the trail site.

- Walnut St.- Schedule for this week is to continue the large box culvert installation at Cornhill. Storm boxes being installed from 4th to 8th, and a storm pipe on the south end of Walnut. Some driveways may be poured back on the north portion of the project, as well.

- Water Plant Basin Construction- Ross Construction is expected to begin work around the 22nd, constructing a chlorination basin at the water treatment plant.
