Re: Manager's Report

Sidewalk Projects –Bids were opened for the north phase of the sidewalk project and were much higher than the engineer's estimate. We only received two bids. The engineer will review the bids and bid documents and let us know if there are any discrepancies. The bids for the southern portion of the sidewalk project will be opened on May 28th.

AMI Project – On June 9, staff training for the AMI will begin, since the meter reading portion will be ready to go. The training will last 2-3 days. The dispatch area at the P.D. is still estimated to be complete around the end of June.

Street Maintenance and Construction Projects – We are getting prices on the street repairs discussed at the last meeting.

Public Works is scheduling a pothole patching machine/crack sealer demonstration unit, tentatively set for June 10. We will see the unit in operation on the street and can make a determination of whether the unit is something we are interested in pursuing.

Air Show – The air show is scheduled for June 27 and 28th. The Special Events Committee met with the air show coordinator and outlined certain conditions, such as how the beer sales are monitored, area preparation and clean up after the event. It should be similar to previous years, otherwise.
