MEMO

To: Mayor and City Council

From: Mark Gaugh, City Manager

Date: October 5, 2015

Re: Manager's Report

City Hall Exterior Concrete Repairs – Ameresco's contractor will be making concrete repairs and we will be applying an asphalt overlay to the drive-thru area.

Wastewater Plant and System Improvements –The revised schedule is as follows:

10-6 – Bid Opening (10:00 for Plant, 10:30 for Collection System)

Water Treatment Plant – Ross Construction has completed the work replacing the basin launders for the treatment clarifier basins.

Sidewalk Projects – Our consultant, TranSystems is making final drawing changes and preparing the projects for re-bid.

Lathrop St. Area Reconstruction – This project has been designed by TranSystems, and there are a few additions to be made for handling storm water. This project will be ready to be bid around January. Our goal is to begin construction this upcoming spring if the bids are favorable. Staff will be holding meetings for residents in the area in the next few months. This meeting will be to go over the project design, proposed schedule and other issues related to the construction project.

Bike Across Missouri (Big BAM) – We attended an informational session at the recent Highway 36 Alliance meeting that dealt with the Bike Across Missouri (BAM) event scheduled for next June. There will be approximately 1,000 to 2,000 cyclists, along with their support people coming through Cameron from St. Joseph. They will continue on to Hannibal, stopping at several locations on the way. One of the EDOC committees has expressed interest in coordinating the event, and City staff will have some involvement, as well. The police dept. will also be active with the event, since the cyclists will be routed through Cameron at some point. We will have more details when one of the BAM organizers visits our area. No date has been set for that visit at this time.
